<u>Math 112-01</u>

Final Exam Information

The comprehensive final exam is worth 150 points and is scheduled for Monday, May 13, 8:00am–9:50am, in Room 3290. Special office hours during finals week:

- Monday, May 13: 10:00am–11:00am
- Tuesday, May 14: 1:00pm-3:00pm
- \bullet Wednesday, May 15: 12:00pm–1:00pm
- Thursday, May 16: 9:00am–10:00am

The following skills and concepts may be assessed on the final exam. The same formula sheet you were given for Test 3 will be attached to the final exam. You are responsible for knowing any other formulas that may be required. (Even though more material was covered in class, you will only be assessed on topics relating to the following skills.)

Skills Checklist for Final Exam

- 1. Determine whether a set is well defined.
- 2. Determine whether a given object is an element of a certain set.
- 3. Write sets in roster (listing) notation or in set-builder notation.
- 4. Demonstrate the proper use of the symbols of set theory.
- 5. Determine whether sets are equal. Determine whether sets are in a one-to-one correspondence.
- 6. Determine subsets of a given set. Determine whether one set is a subset of another.
- 7. Determine the cardinality of a set.
- 8. Find the complement of a set.
- 9. Find unions and intersection of sets.
- 10. Determine set differences.
- 11. Shade the region of a Venn diagram corresponding to a given combination of sets.
- 12. Solve application problems using two- or three-set Venn diagrams.
- 13. Identify statements.
- 14. Write the negation of a statement.
- 15. Write statements symbolically.
- 16. Construct basic truth tables, including those for negations, conjunctions, disjunctions, conditionals, and biconditionals.

- 17. Construct truth tables for compound statements.
- 18. Use DeMorgan's laws to write the negation of a compound statement.
- 19. Write the converse, inverse, and contrapositive of a conditional statement.
- 20. Use truth tables to determine whether a compound statement is a tautology, self contradiction, or neither.
- 21. Find the interest earned by an account bearing (simple or compound) interest.
- 22. Find the future value of an account bearing (simple or compound) interest.
- 23. Find future values and payments for annuities.
- 24. Find the present value of future payments.
- 25. Find mortgage payments and construct an amortization schedule.
- 26. List the sample space for an experiment and identify events.
- 27. Know the difference between theoretical and experimental probabilities.
- 28. Determine the theoretical probability of an event.
- 29. Given data, determine the experimental probability of an event.
- 30. Understand and use the properties of probability (complements, unions, intersections, etc.).
- 31. Draw tree diagrams and determine probabilities in multistage experiments.
- 32. Compute conditional probabilities.
- 33. Determine odds and expected values.
