Show all work to receive full credit. Supply explanations when necessary. You must work individually on this assignment. The assignment is due no later than April 28.

- 1. (2 points) Use Newton's method, starting with $x_0 = -1$, to approximate the solution of the equation $x = \cos x$. Which one of these numbers is closest to your value of x_2 ? (Show work for credit.)
 - (a) 0.75
 - (b) 2.98
 - (c) 8.72
 - (d) -0.51

f(x) = X - cos x

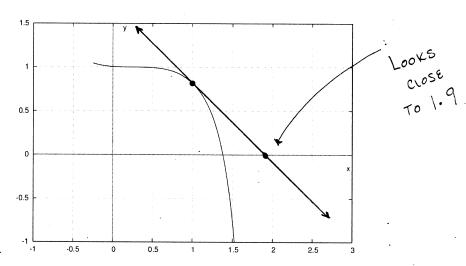

$$X_{N+1} = X_N - \frac{X_N - \cos X_N}{1 + \sin X_N}$$

$$X_0 = -1$$
, $X_1 = 8.7160$, $X_2 = 0.9761$

2. (1 point) The graph of y = f(x) is shown below. Suppose you use Newton's method, starting with $x_0 = 1$, to approximate a solution of f(x) = 0. Which one of the following numbers would be closest to x_1 ? (Explain or show work.)

- (c) 2.5
- (d) 1.0

- 3. (3 points) Consider the function $f(x) = x^3 16x + 32$, and suppose you wish to find a solution of f(x) = 0.
 - (a) Use Newton's method starting with $x_0 = 2$. Take several steps. What do you notice?

$$f(x) = x^{3} - 16x + 3a$$

$$f'(x) = 3x^{3} - 16$$

$$x_{n+1} = x_{n} - \frac{x_{n}^{3} - 16x_{n} + 3a}{3x_{n}^{3} - 16}$$

(b) Use Newton's method with a better initial guess. Take enough steps to determine the solution with several digits of accuracy.
